In the year 1866 there growth of one is to give it of the having, in certain sections, what was 260,000 pounds mined, or rest, or so nearly that as to be is called a "crawfish" tendency which reduces the fertility of the soil; while in the Southern and Southwestern parts it is of a mixture of sand loam and clay. In the West and North the surface is very rough and hilly, beemerge from a primeval ocean, ing that portion which was torn, rifted and upheaved by those terrific convulsions during the period of internal disturbance thousands of years ago; therefore the soil is generally rocky and sandy except where there has been alluvial deposits. This section is the center of the mining industries.

## Location, Area, Etc.

St. Francois County lies South and West of Ste. Genevieve County, North of Madison, West of Iron and Washington and South of Jefferson County. It is very irregular in shape, somewhat resembling an aggregation of triangles obtuse in shape, having the apexes facing, and has an area of about 450 square miles, or 288,000 acres. The surface is generally hilly, especially in the West and North portions, but there are several
